MACHINE ENGINEERING (I) PVT. LTD.

Characteristics of palletizing systems

The implementation of the palletizing systems allows for greater productivity in the current operations, since practically all the processes are automated, thereby optimizing the workforce in logistics.

Thanks to this reduced manual handling, fewer breakages or damage to the products occur, since there is controlled automation in charge of handling and transferring the merchandise. The equipment is programmed to be able to work with different sizes and weights guaranteeing its safety.

Palletizing systems will also make you more organized in storage spaces. You will have a control of the products that enter and leave the facilities, their location, dates, traceability ... This will allow you to organize the articles according to multiple parameters: typology, size, volume, date of entry, date of departure, etc.

This control of the products allows maintaining the stock levels, so that you do not suffer overloads or shortages of items. Access continuous counts and plan operations based on available resources.

6

**ADVANTAGES
OF WORKING WITH
PALLETIZING SYSTEMS
IN A STORAGE SPACE**

Increased productivity: the system provides agility and automation of logistics processes thanks to the help of robotic arms, clamps or claws.

It reduces loading, unloading and storage times thanks to the use of technology in most of the processes.

Optimize warehouse space and have a better organization in the count and control of merchandise.

It provides more security for logistics personnel during the handling and transportation of goods.

Reduces the number of broken or damaged products during handling thanks to reduced movements.

·Improve order picking, increase service quality, and save on costs.

Learn about the benefits of purchasing Columbia equipment

- After sales service
- Maintenance and spare parts service
- Personalized attention with our clients
- Installation
- Preventive Maintenance
- Team optimization
- National coverage
- Immediate response
- Technical advice and service
